TN_161 FT4222H Errata Technical Note

Document Reference No.: FT_001198

Version 1.2

Issue Date: 2016-10-18

The intention of this errata technical note is to give a detailed description of known functional or electrical issues with the FTDI FT4222H series device.

The current revision of the FT4222H series is **Revision C, released Oct 2016.**

Use of FTDI devices in life support and/or safety applications is entirely at the user's risk, and the user agrees to defend, indemnify and hold FTDI harmless from any and all damages, claims, suits or expense resulting from such use.

1 FT4222H Revision

FT4222H part numbers are listed in **Table 1**. The letter at the end of the date code identifies the device revision.

The current revision of the FT4222H series is **revision C, released Oct 2016**. At the time of releasing this Technical Note there is no known issue with this silicon revision.

3.1 Revision A

3.1.1 Android issues

Introduction:

FT4222H supports Android devices. With J2XX, it is possible to develop an app utilizing the FT4222H.

Issue:

The following issues may happen when the FT4222H connects to an Android device.

1. The FT4222H works as an SPI master, it may reset during transferring data.
2. The FT4222H works as I²C slave, the last byte may be lost when the receiving buffer is full.

Workaround:

There are no known workarounds available. This issue is corrected at revision B.

Package specific:

The effected packages are listed in Table 5.

Package	Applicable (Yes/No)
FT4222HQ	Yes

Table 5 Effected Packages

3.1.2 CPU usage and latency timer issue

Introduction:

In USB, data is received from the device to the PC by a polling method. The driver will request a certain amount of data from the USB scheduler. The latency timer is provided to allow efficient polling and flushing short data packets.

Issue:

The FT4222H doesn't support the latency timer feature and causes the USB scheduler to be busy and uses too much CPU resource.

Workaround:

There are no known workarounds available. This issue is corrected at revision B.

Package specific:

The effected packages are listed in Table 6.

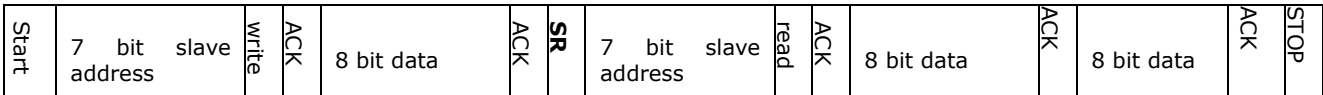

Package	Applicable (Yes/No)
FT4222HQ	Yes

Table 6 Effected Packages

3.1.3 I²C combined message issue

Introduction:

A master issues at least two reads and/or writes to one or more slaves. In a combined message, each read or write begins with a START and the slave address. After the first START, the subsequent starts are referred to as repeated START bits; repeated START bits are not preceded by STOP bits, which indicate to the slave the next transfer is part of the same message.

Issue:

Some I²C devices need to communicate with a combined message format. However, the FT4222H doesn't support this feature.

Workaround:

There are no known workarounds available. The feature of I²C combined messages will be supported at revision B.

Package specific:

The effected packages are listed in Table 7.

Package	Applicable (Yes/No)
FT4222HQ	Yes

Table 7 Effected Packages

3.1.4 Default pin status

Introduction:

By default, the FT4222H will be initialized as an SPI master after power on. When the FT4222H is ready, i.e. finishes USB enumeration, the status of the pins of the Rev.A device is as shown below:

pin num	pin name	mode 0	mode 1	mode 2	mode 3
8	SCK	SCK (OUT, low)	SCK (OUT, low)	SCK (OUT, low)	SCK (OUT, low)
9	MISO	MISO (IN)	MISO (IN)	MISO (IN)	MISO (IN)

3.1.5 Additional suspend settings supported

Introduction:

The FT4222H provides flexible settings for suspend behavior via FT_Prog. The rev.B of the FT4222H device provides additional options for customers to configure the pin status during suspend.

- SUSPEND_OUT_POL
 - **Suspend output is High active. (default)**
 - Suspend output is Low active.
- SPI_SUSPEND_MODE
 - **Disable SPI IP and make SPI pins input (tri-state). (default)**
 - Keep SPI pin status when the FT4222H suspends.
 - Enable SPI pin control. Refer to SPI_SUSPEND for detail settings.
- SPI_SUSPEND (enable by SPI_SUSPEND_MODE)
 - miso_suspend
 - push low when suspend
 - push high when suspend
 - mosi_suspend
 - push low when suspend
 - push high when suspend
 - io2_io3_suspend
 - push low when suspend
 - push high when suspend
 - ss00_suspend
 - No change (default)
 - push low when suspend
 - push high when suspend
- GPIO_SUSPEND
 - gpio0_suspend
 - No change (default)
 - input (tri-state)
 - push low when suspend
 - push high when suspend
 - gpio1_suspend
 - No change (default)
 - input (tri-state)
 - push low when suspend
 - push high when suspend
 - gpio2_suspend
 - No change (default)
 - input (tri-state)
 - push low when suspend
 - push high when suspend
 - gpio3_suspend
 - No change (default)
 - input (tri-state)
 - push low when suspend
 - push high when suspend

The default pin status of the Rev.A device during suspend is shown below:

pin num	pin name	mode 0	mode 1	mode 2	mode 3
8	SCK	SCK (OUT, low)	SCK (OUT, low)	SCK (OUT, low)	SCK (OUT, low)
9	MISO	MISO (OUT, low)	MISO (OUT, low)	MISO (OUT, low)	MISO (OUT, low)
10	MOSI	MOSI (OUT, low)	MOSI (OUT, low)	MOSI (OUT, low)	MOSI (OUT, low)
11	IO2	IO2 (OUT, low)	IO2 (OUT, low)	IO2 (OUT, low)	IO2 (OUT, low)
12	IO3	IO3 (OUT, low)	IO3 (OUT, low)	IO3 (OUT, low)	IO3 (OUT, low)
13	GPIO0	GPIO0 (OUT, low)	SS10 (OUT, no change)	SS10 (OUT, no change)	GPIO0 (OUT, low)
14	GPIO1	GPIO1 (OUT, low)	SS20 (OUT, no change)	SS20 (OUT, no change)	GPIO1 (OUT, low)

3.2 Revision B

3.2.1 Custom PID settings are ignored

Introduction

It is not possible to change the PID on the FT4222H from our default value of 601C to a custom value. Note, there are no problems changing the VID.

Issue

Any changes made to the PID using the OTP are ignored and the value returns to its default state.

Workaround

There are no known workarounds available. This issue is corrected at revision C.

Package specific:

The effected packages are listed in Table 14.

Package	Applicable (Yes/No)
FT4222HQ	Yes

3.2.2 Slow response after the host restarts

Issue

After the host restarts, the FT4222H may have slow response or outputs unexpected bytes from its USB interface.

Workaround

There are no known workarounds available. This issue is corrected at revision C.

Package specific:

The effected packages are listed in Table 15.

Package	Applicable (Yes/No)
FT4222HQ	Yes

3.2.3 SPI master in single mode loses data and no response

Issue

The SPI master in single mode may lose the last byte and then no response. This issue may be observed easily in the following configurations:

- 48M/128, 48M/256, 48M/512
- 24M/64, 24M/128, 24M/256, 24M/512

When this issue happens, the support lib function FT4222_SPIMaster_SingleReadWrite may not return, or return FT_FAILED_TO_WRITE_DEVICE.

This issue can be observed with the rev A also.

Workaround

There are no known workarounds available. This issue is corrected at revision C.

Package specific:

The effected packages are listed in Table 16.

Package	Applicable (Yes/No)
FT4222HQ	Yes

4 FT4222H Series Package Markings

The FT4222H is supplied in a RoHS compliant leadless VQFN-32 package. The package is lead (Pb) free, and uses a 'green' compound. The package is fully compliant with European Union directive 2002/95/EC. An example of the markings on the package is shown in the figures below.

Figure 4.1 VQFN-32 Package Markings

The date code format is **YYWW** where WW = 2 digit week number, YY = 2 digit year number. This is followed by the revision number.

The code **XXXXXXXXXX** is the manufacturing LOT code
